4.Write a SQL query to retrieve the employee ID, first name, role, and department of employees who hold leadership positions (Manager, President, or CEO)

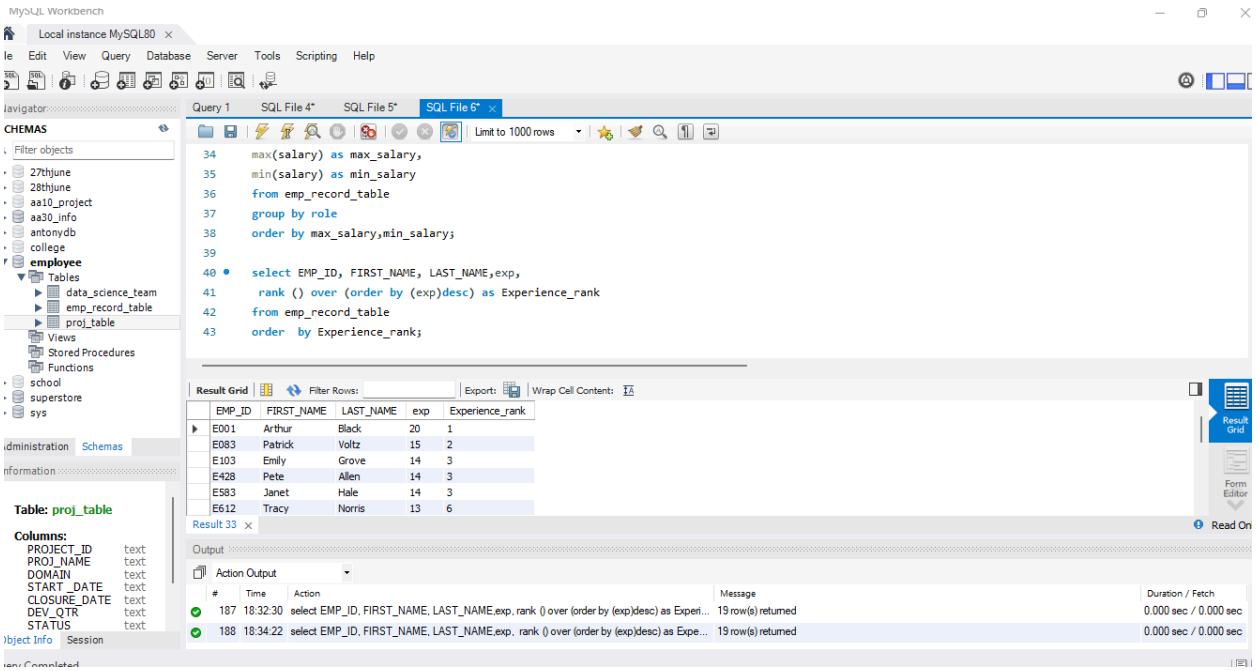

5.Write a query to list employee details, including EMP_ID, FIRST_NAME, LAST_NAME, ROLE, DEPARTMENT, and EMP_RATING, grouped by department. Also include the respective employee rating along with the max emp rating for the department

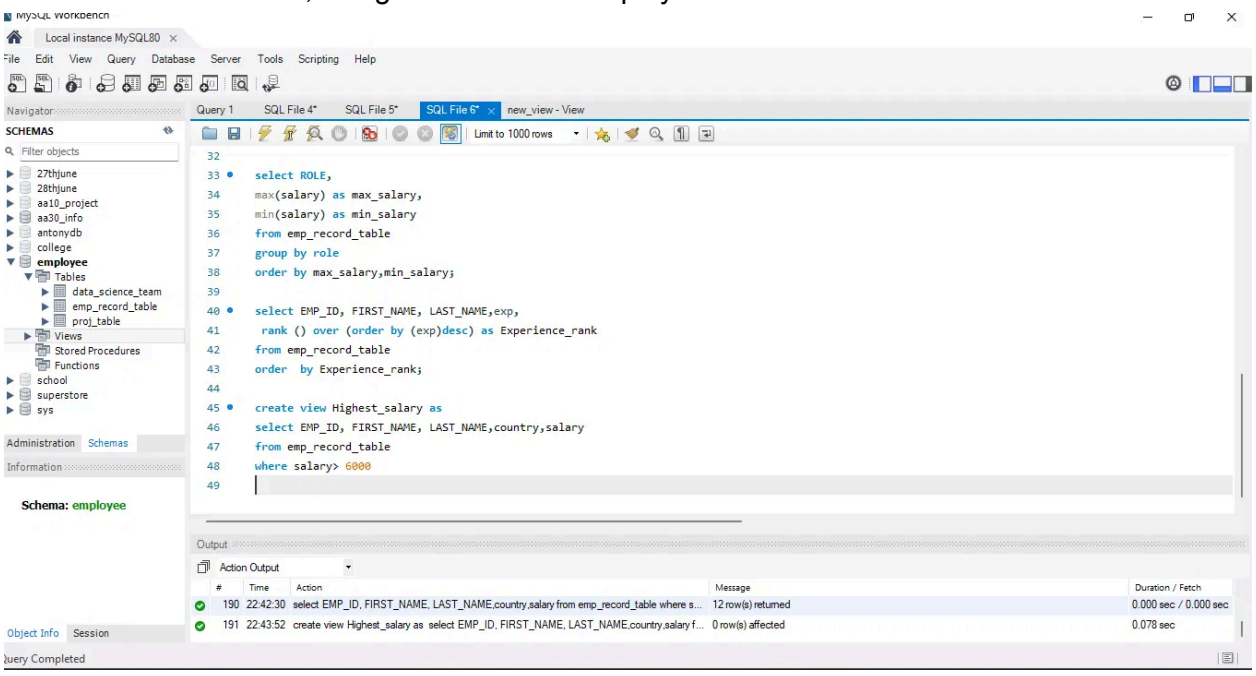

6. Write a query to find the minimum and maximum salary for employees grouped by their role, using data from the employee record table

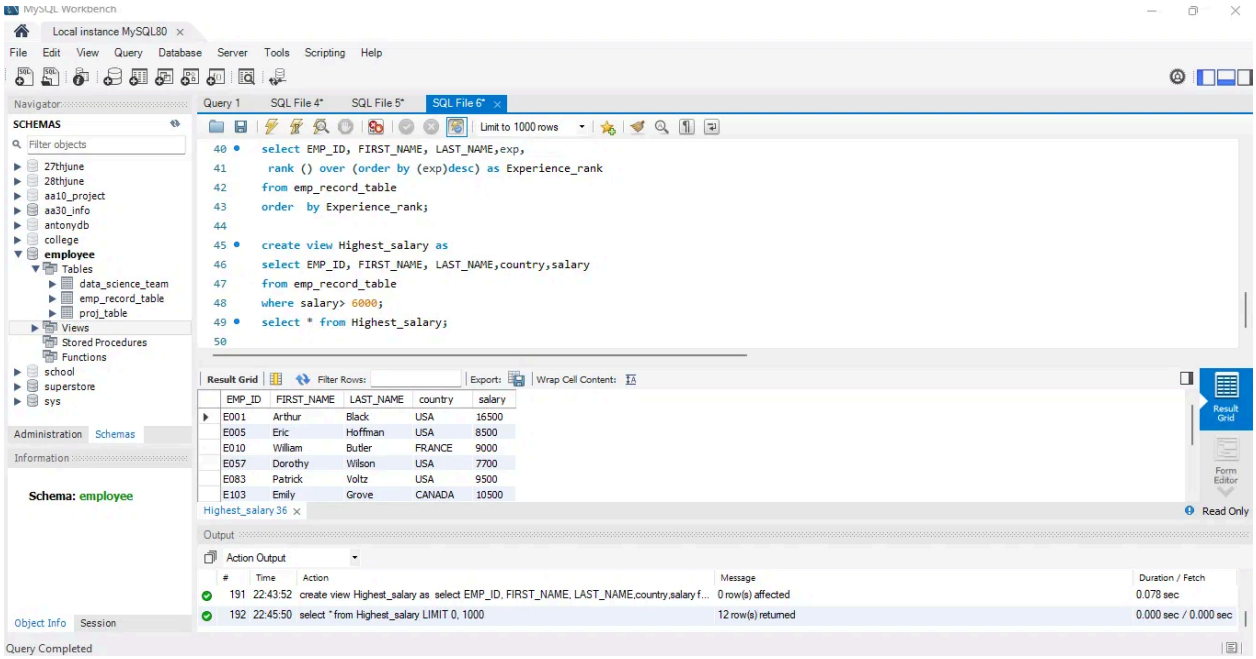

7. Write a query to assign a rank to each employee based on their years of experience, using data from the employee record table

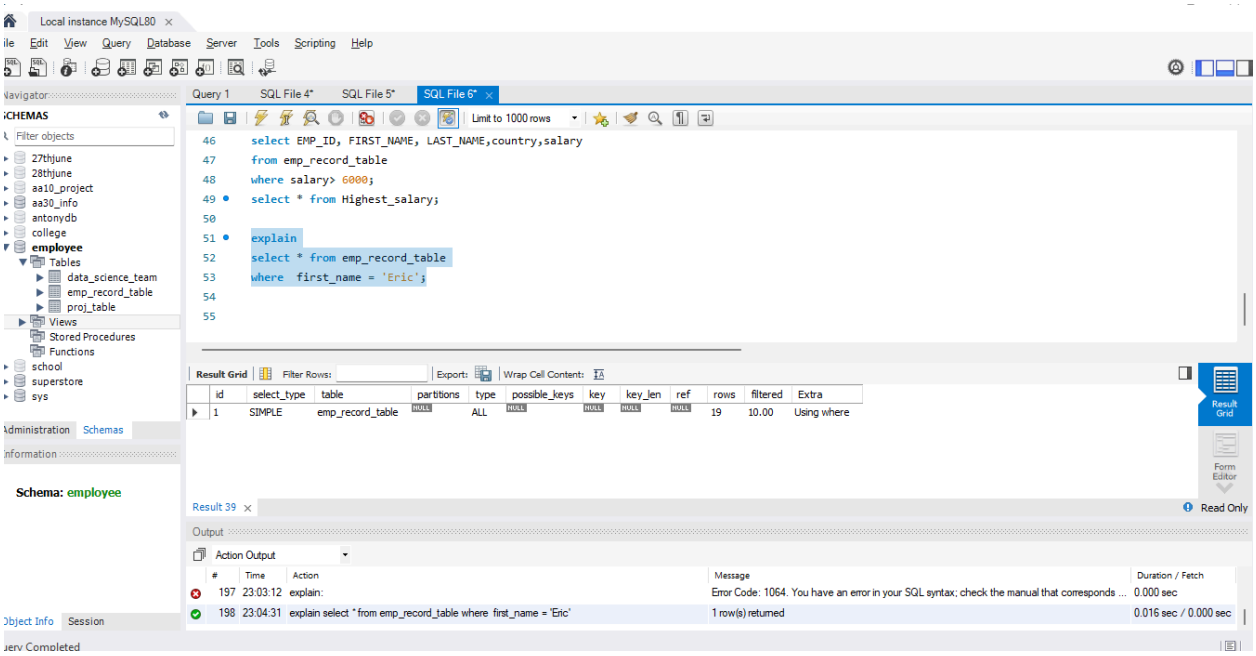

8. Write a query to create a view that displays employees in various countries whose salary is more than six thousand, using data from the employee record table

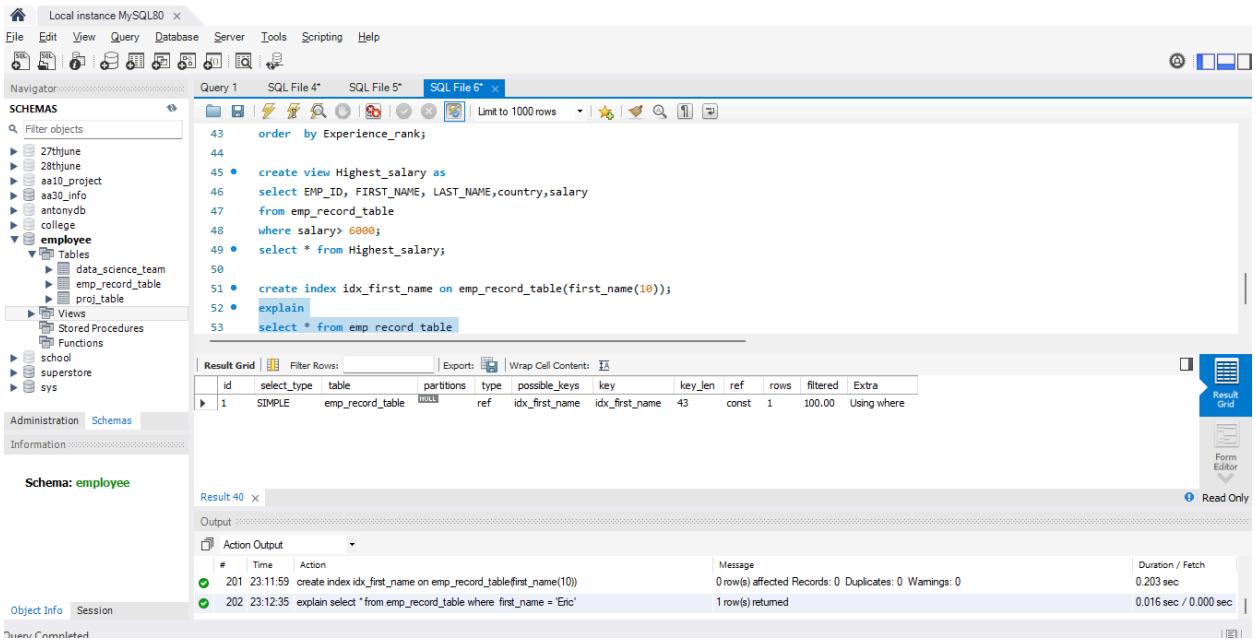

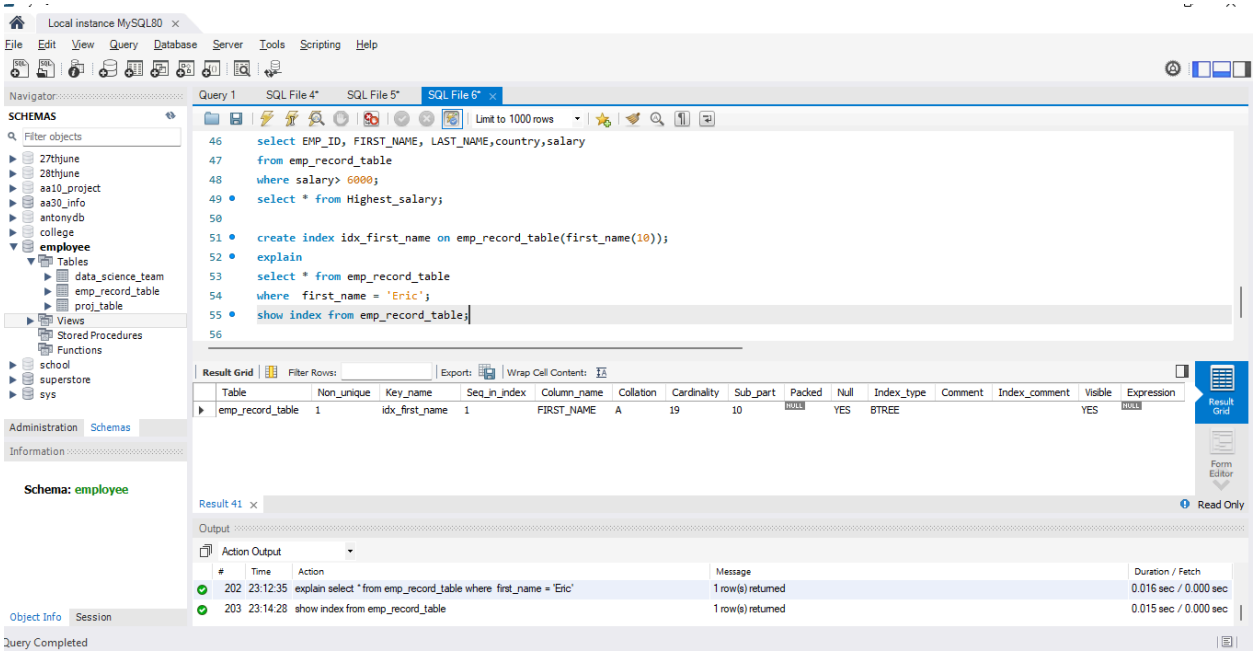

9. Write a query to create a view that lists employees across different countries who earn a salary greater than 6000, using data from the employee record table

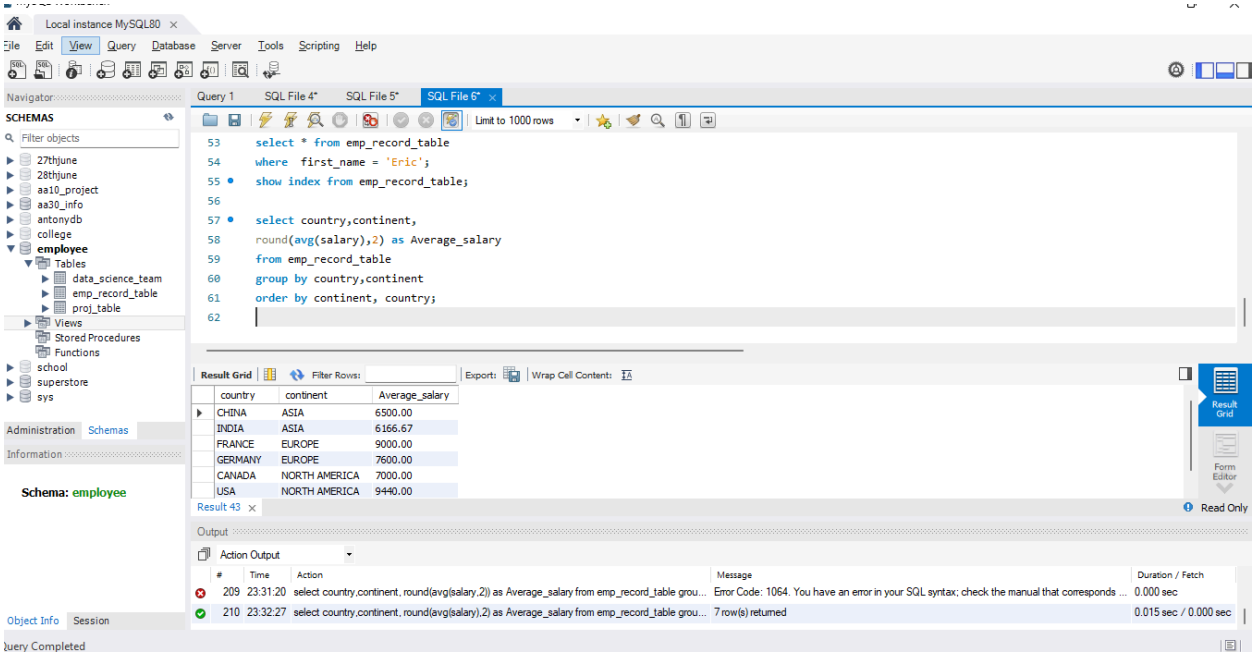

10. Create an index to improve the cost and performance of the query to find the employee whose FIRST_NAME is Eric in the employee table, after checking the execution plan

11. Write a query to calculate the average salary distribution based on the continent and country. Take data from the employee record table
